## Making Spaces Versatile

**The L'oreal professional academy project designed by DCA Architects is versatile and adaptable**

**P**rofessional Products Development Academy for L'oreal is a state-of-the-art Academy to train professionals and educate them in the latest product offerings by L'oreal. Located in Mumbai, it is spread across 7000 sq.ft. The design creates interactive spaces for professionals to work in multifunctional zones that blend seamlessly.

*L'oreal and group DCA adhere to similar core values and believe in reducing carbon footprint in the environment.*

**Ar. Amit Aurora**

*All projects are designed in mind with a similar approach of ensuring environmental benefit in mind.*

**Ar. Rahul Bansal**

A proactive approach to sustainable design is demonstrated through water efficiency and energy consumption along with innovation in design, especially in creating a space which has the ability to transform itself into a huge space for promotional events, and then re-transform into classrooms, a challenging requirement in the design brief. In the words of the client, the final outcome has turned out to be one of the

top education academies in the world for L'Oreal Group Worldwide, which is Platinum LEED certified.

Designing a state-of-the-art academy for a brand like L'oreal was a challenging task in itself. The teamwork was commendable and with similar articulated core values that the L'oreal brand and group DCA shares, the executed design was commendable. ♦
